MICHIGAN HEART &
VASCULAR INSTITUTE

Atrial fibrillation affects over two million Americans and is the most common type of abnormal heart rhythm in the elderly. If left untreated, AF can lead to stroke and congestive heart failure.

Saint Joseph Mercy Health System offers a new minimally invasive surgical procedure called the “Wolf-Mini-Maze” that has the potential to cure AF. This procedure allows patients to discontinue many of the medications they use for existing AF and to potentially stop the use of blood thinners altogether.

Thursday, March 4, 2010
6 - 8:30 p.m.

Registration/Refreshments: 6 p.m. • Lecture: 6:30 p.m.

St. Joseph Mercy Hospital Ann Arbor
Education Center – Auditorium, 5305 Elliott Drive, Ypsilanti
